

Ace-MEC Air Circuit Breakers

Electric Equipment

LS Industrial Systems
www.lsis.biz

New Name of  LG Industrial systems

Air Circuit Breakers

It is customer's ACB that considers a customer's convenience in the use through the increase in the reliance of the operation characteristic by digital type of trip relay and the easy checking of load condition and fixed current value by LCD.

LS "ATS with ACBs" interlocks the ACBs by mechanically and electrically. It is more reliable in switching operation and faster than existing ATS. The switching time is adjustable.

- * Application: The place which require stable power supply (Hospital, Communication facility, Computer room, Pump room, Office building)
- * Comparing with the existing ATS, the LS "ATS with ACBs" has high breaking capacity and protects the loads from the over-current and ground fault

Characteristics

Compact & Modular design

- More compact overall dimensions and light weights.
- LS Ace-MEC ACB have been made three types of modular design criteria to facilitate their installation and integration in low voltage switch boards.

High breaking capacity

- LS Ace-MEC ACB provides high breaking capacity up to 100kA

Various certification and approval

- LS Ace-MEC ACB is type-tested by IEC 60947 and GB 14048-2-94 standard
- KEMA (Netherlands), CESI (Italy), KERI (Korea), ISO 9001, ISO 14001

Safety and Convenience

- OCR terminals are located in front
- Modulized mechanical part and accessories
- for easy maintenance and inspection Improved draw-out rail for easy draw-out
- Minimized arc space
- Molded frame

※ The reverse connection of power source and load part is available but please use the normal connection for the safety in maintenance and inspection

※ Neutral pole of ACB 4-pole type is the breaking structure which is opened after pre-closing.

High functional digital type trip relay

- Easy inspection by LCD
 - Load current value
 - Setting values of each trip characteristics
 - Fault current(Max) value
 - Tripping time
- Self-diagnosis function
 - noEr : No error
 - Err-1 : No MTD coil
 - Err-2 : Program error
 - Err-4 : Configuration resistor error
 - Err-8 : Watch dog error
- Self-test function
 - It is available to check whether OCR is operated normally or not by applying external power
- Pre-alarm function
- Contact output of the each tripping cause and LED indication
- OCR alarm contact (AL, 2a)

Variety of accessories

Optional accessories

- Interlock device
 - MI (Mechanical Interlock)
 - ATSC (ATS Controller)
- Key interlock, ON-Lock (K2)
- Key lock(K1)
- ON/OFF button lock(B)
- Door Frame(Df)
- Door Interlock(DI)
- UVT, UVT controller: Standard(1NO 1NC)

Type	Operating time	Rated voltage	
Instantaneous type	under 0.2sec	AC	110, 220, 380, 460V
		DC	24, 48, 110, 125V
Delay type	over 0.5sec	AC	110, 220, 380, 460V
		DC	24, 48, 110, 125V
	over 3sec	AC	110, 220, 380, 460V
		DC	-

- Cell switch(4C, 8C)
- Shorting "b" contact (SBC, 5b max, Shorting b contact)
- Safety shutter lock (STL)
- Miss insertion prevent device(MIP)
- Condenser tripping device(CTD)
- OCR tester(OT)

Standard attachment of draw-out type

- Pad lock
- Position indicator (connected, test, disconnected)
- Counter(5-digit)
- Lifting hook
- Insulating barrier
- OCR alarm contact (AL, 2a)

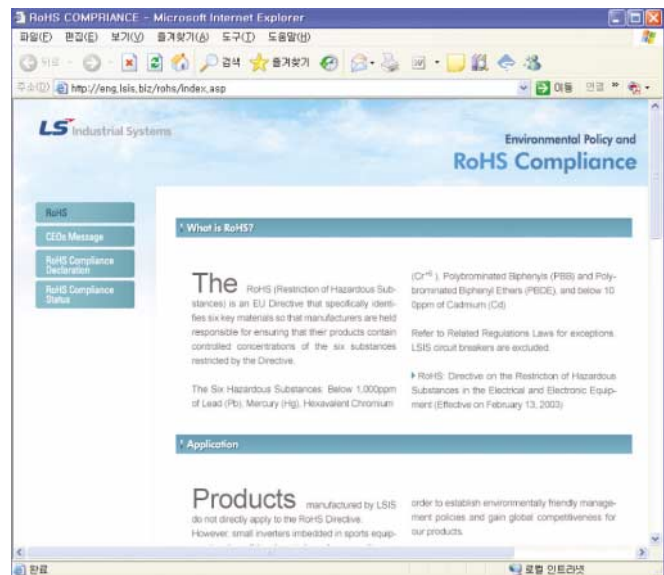

Environmental Policy and RoHS Compliance

What is RoHS?

The RoHS is an EU Directive that specifically identifies six key materials so that manufacturers are held responsible for Ensuring that their products contain controlled concentration of the six substances restricted by the Directive.

The six Hazardous Substances : Below 1,000ppm of Lead(Pb), Mercury(Hg), Hexaval-Ent Chromium(Cr+6), Polybrominated Biphenyls(PBB) and Polybrominated Biphenyl Ether(PBDE), and below 10 Oppm of Cadmium(Cd).

►RoHS : Directive on the Restriction of Hazardous Substances in the Electronic Equipment (Effective on February 13.2003)

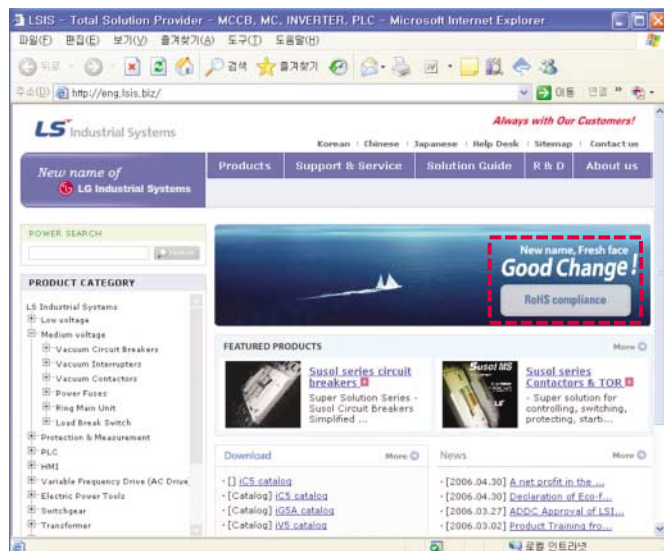

Application

Products manufactured by LSIS do not directly apply to the RoHS Directive.

However, small inverters imbedded in sport equipment and small breakers in large home appliances can be indirectly applied to the Directive.

LSIS continues to comply with the RoHS directive in order to establish environmentally Friendly management policies and global competitiveness for our products.

According to the regulation, eight o the 10 WEEE products excluding 'medical equipment' and 'control systems' must be RoHS compliant.

Declaration of RoHS Compliance

LS Industrial System Co.,Ltd
Yonsei Jaedan Severance Bldg.,84-11, Namdaemunno 5-ga,
Jung-gu, Seoul. 100-733, Korea (Manufacturer)

Do hereby confirm that

With relevance of the EU Directive 2002/95/EC of 27 January 2003 on the Restriction of the use of certain Hazardous Substances in electrical and electronic equipment –RoHS , our listed products do not contain any of the following banned substances listed below :

Lead
Mercury
Cadmium
Hexavalent Chromium
Polybrominated Biphenyls (PBB)
Polybrominated Diphenyl Ethers (PBDE)

The following products sold as of July 1, 2006 will be RoHS compliant.

Products Note)

Molded Case Circuit Breaker (MCCB)
Earth Leakage Circuit Breaker (ELCB)
Magnetic Switch (MC,TOR)
Manual Motor Starter (MMS)
Protection & Measurement device
Programmable Logic Controller (PLC)
Variable Frequency Drive (AC Driver)

Note) Please visit www.lsis.biz and see "RoHS Compliance" menu to verify the specification of each product's "RoHS Compliance"

Place/Date : Korea/ April 4, 2006

Certificate & Approval					KERI, CESI, KEMA Note9)				

Note) 1. Rated current of IEC standard

2. Trip relay is divided into 50Hz and 60Hz. Please be careful when you order it.

3. The generator protection relay is only available in OCR-III.

4. Ace-MEC ACB with interlock device can be a substitute for ATS (For order, refer to page 55)

5. For mainbody, only horizontal type is available. For cradle, vertical type is optional. In case of vertical type use of the horizontal type, the user needs to apply the vertical adapter. The vertical type is standard for 4000/500AF.

6. For 4000/5000AF, height is 455mm

7. Slim type 4000AF, height is H:460, D:509

Note) 8. Slim type 4000A

① The cubicle of High capacity low voltage cubicle can get the most suitable space(Dimension is 40% smaller than existing Ace-Mec ACB 4000A)

② Current capacity of neutral line(N phase) is 100%

③ When the OCR-II is applied, only external input power is available.

④ Only vertical type of plug in type is available.

9. It is guaranteed by KEMA CB certificate.

10. OCR-II is applied to only external CT (power) in slim 4000A ACB.

Charging method

Manual charging type

The closing coil is charged by manual charging handle. For closing, first charge the spring by using the charging handle, and then press the close button (I, ON) for closing, the open button(O, OFF) for opening

- When closing spring is completely charged, charge indicator indicate "Charge"
- It is mechanically locked not to press the close button (I,ON) and open button(O,OFF) simultaneously
- Contact condition of the main circuit is shown on the (O,OFF), (I,ON) indicator.

Motor charging type

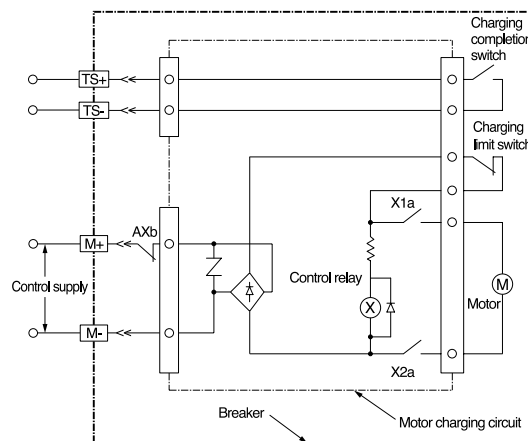

The closing spring is charged by a motor ON charging method or OFF charging method is available selectively.

- OFF charging method: When the breaker opened, the closing spring is charged automatically. It can change to ON charging method by removing b(Axb) contact like beside circuit diagram
- ON charging method: The closing spring is charged automatically when the breaker is closed. It can change to OFF charging method by using b(Axb) contact There is a contact to indicate the charging completion(TS+,TS-). Since the contact signal of charging completion switch is connected to the external terminal, It is easy to construct a circuit(ex. Automatic closing circuit) by using that contact
- Manual charging is also available
- With the breaker closed(I,ON), only manual charging is possible(motor charging cannot be performed)
- With the open button(O,OFF) pressed, closing cannot be performed(electrical and mechanical lock)
- When OFF Lock device is in use, closing cannot be worked.(electrical and mechanical lock)
- Opening should follow at least one second after completion of charging
- Pumping prevent circuit is included with the closing coil(electrical lock)
- Please note that pumping prevent circuit can be reset when the voltage of input signal drops

Voltage	Reset voltage
AC	Rated voltage 85% under
DC	Rated voltage 85% under

● Motor charging circuit

- Note) 1. Since charging completion contact(TS+,TS-) terminal is for contact output power should not be allowed.
 2. Charging completion contact capacity is equal to that high of capacity of auxiliary contact in page 27 .

● Motor ratings

Rated voltage	Inrush current peak value(A)	Steady current(A)	Power consumption(W)	Charging time(sec)
AC/DC	110	7	3.5	385
50/60Hz	220	7	3.5	770
DC	125	7	3.5	437
	24	30	11	264
	48	30	5.5	264

Note) The range of operating voltage: 85~110%

Auxiliary devices

1 Pad lock(PL)

To fix a ACB into a position (Dis-connected, Test, Connected)

* Standard offer in the draw-out type

2 Position Indicator

To indicate the position (Dis-connected,Test, Connected) of a ACB

* Standard offer in the draw-out type

3 Closing Coil (CC)

- To close the breaker by remote control
- The coil only operates when the power is supplied continuously over 100ms
- Power should be supplied separately from the motor charging power.
- Electric pumping prevent circuit is built in it.

Rated voltage(V)	Operational voltage(V)	Inrush current peak value(A)	Steady current(A)	Closing time(sec)
AC/DC	110	94~121	2	1
50/60Hz	220	187~242	3	1.3
DC	125	106~138	2.3	1
	24	21~26V	30	3.5
	48	41~53V	30	7

Note) 1. Closing time is from coil excitation to contact closing

2. Steady current is the value at maximum rated voltage

3. Please be careful that the pumping prevent circuit is reset when its voltage is under 85% of the rated voltage

4. The extent of operation voltage is 85~110% of the rated voltage

4 Shunt coil(SHT)

- To open the breaker by remote control
- Use an auxiliary contact(INO) to prevent coil burning
- When the control power is 'OFF' at the ACB is 'ON' state, the ACB remains 'ON'

Rated voltage(V)	Operational voltage(V)	Inrush current peak value(A)	Steady current(A)	Closing time(sec)
AC/DC	110	77~121	2	1
50/60Hz	220	154~242	3	1.3
DC	125	88~138	2.3	1
	24	21~26V	30	3.5
	48	41~53V	30	7

Note) The extent of operation voltage is 70~110% of the rated voltage.

5 OCR Alarm contact

- OCR alarm contact is fundamentally installed in only ACB with trip relay. When the ACB is tripped by the OCR operation, electrical signal flows through the OCR alarm contact for remote supervisory(INO)

• Contact type

Type	OCR-II	OCR-III
Operational type	Momentary operation type (Under 15ms)	Magnetic maintenance type
Formation of contact	2NO	2NO

• Operating condition of contact

Condition of circuit breaker	Cause of trip	Condition of "a" contact
TRIP	Long-time delay trip, Short-time delay trip, Instantaneous-time delay trip, Ground fault trip	ON
	Trip button, Shunt trip coil(SHT), Undervoltage trip(UVT)	OFF
ON		OFF
OFF		OFF

- Connected
- Test
- Disconnected

• Pumping prevent circuit

• Trip coil circuit

• Contact capacity

Type	Capacity
Ratings	AC 250V 5A
	DC 30V 5A
Rated current	5A
Maximum contact voltage	AC 380V
	DC 125V
Maximum contact current	5A
Minimum applicable load	DC 5V 10mA

Electronic trip relay | OCR-II

External configuration

No	The name of knob	Mode	Setting step
①	Rated current	I_n	$(0.4-0.5-0.6-0.7-0.8-0.9-1.0) \times I_n \text{ Max}$
②	Continuous current	I_c	$(0.6-0.7-0.8-0.85-0.9-0.95-1.0) \times I_n$
③	Long-time delay tripping time	LTD	15 - 30 - 60 - 120 - 240 - 480 sec
④	Short-time delay tripping current	I_s	$(2-3-4-6-8-10-\text{OFF}) \times I_n$ In OCR trip operation, "STD" LED is turned 'on'
⑤	Short-time delay tripping time	STD	0.05 - 0.1 - 0.2 - 0.3 - 0.4 - 0.5 sec
⑥	Instantaneous-time delay tripping current	I_i	$(4-6-8-10-12-16-\text{OFF}) \times I_n$ In OCR trip operation, "INST" LED is turned 'on'
⑦	Pre-alarm current	I_p	$(0.7-0.8-0.9-0.95-1.0-\text{OFF}) \times I_c$ In OCR trip operation, "PAL" LED is turned 'on'
⑧	Ground fault current	I_g	$(0.1-0.2-0.3-0.4-0.5-\text{OFF}) \times I_n \text{ Max}$ In OCR trip operation, "GTD" LED is turned 'on'
⑨	Ground fault time	GTD	0.1 - 0.3 - 0.8 - 1.5 - 3.0 sec

Note) I_{np} is a function for neutral protection. It protects neutral phase in 4 pole ACB from over current.

LED of the trip indicator and contact

LED	Contact	Kinds of tripping characteristics
LTD	T1 -	Long-time delay tripping indicator
STD	T2 -	Short-time delay tripping indicator
INST	T3	Instantaneous-time delay tripping indicator

Set] Inst : 16.0k
16 (4 - 16, OFF)

Mode

**Instantaneous-time delay trip setting
with knob.**

(Inst = 4/6/8/10/12/16/OFF) × In

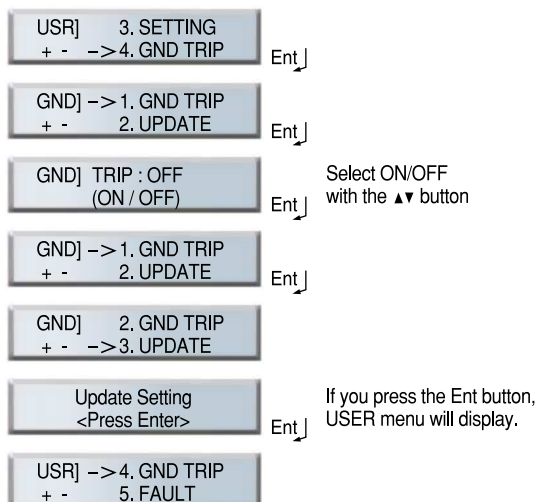

SET] -> 9. Iinst
+ - 1. In

Note 2) When user set the position of ground fault trip current as OFF position,
Ig and Inp shall be also OFF.

Electronic trip relay | OCR-II

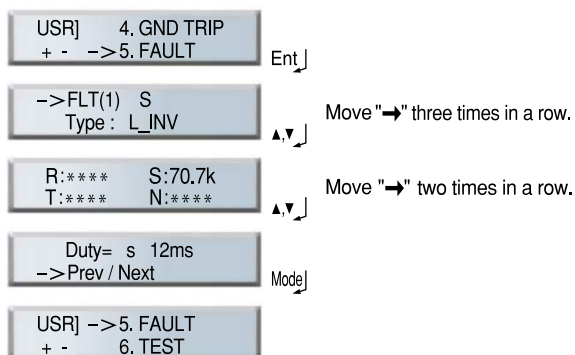

Button operation method in set-up modes

Select Ground Fault

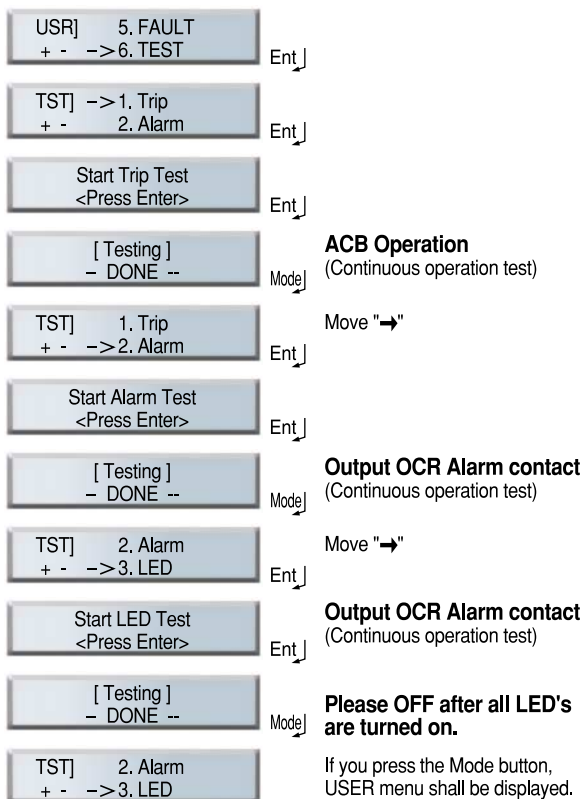

Note) ON: ACB trip, Ground fault Tripping indicator (T0, T4) ON
OFF: ACB No trip, Ground fault Tripping indicator (T0, T4) ON

FAULT Mode

Note) 1. In the status of pressing ▼ Button, if you press "Ent" button, next Fault mode will be displayed.
2. If you press the Mode button, USER menu will display.

TEST Mode

External configuration

① Display LCD

- Display of normal condition: In use current of R, S, T, N phases
- Fault display: Fault phases and kinds of fault
 - Long-time delay trip: L_INV
 - Short-time delay trip: S_INV
 - Instantaneous-time delay trip: INST
 - Ground fault trip: GND ⇒ LCD reset method: Press "Func" button after "Ent"

EX)

FAULT : R
TYPE : L_INV

⇒ Long-time delay trip occurring in "R" phase

② Condition display LED: "Run"

- The LED blinks with normal operation of OCR.

③ Over-current display LED

- "Pick-up" LED: In case of over default pre-alarm current flows the "Pick-up" LED warning blinks and is turned off after OCR operation.
- "Fault" LED: The OCR operation of generating fault turns on "Fault" LED.

④ Communication display LED: "Rx, Tx"

- Blinks with normal communication of OCR.

⑤ Reset button

- Out-put contact signal reset and OCR over-current display LED.

⑥ Selection button

- Func: Mode selection button
- Ent : Selection button of various set-up value
- ▲, ▼: Set-up value input button

⑦ RS232 Port

- OCR operation check port as connecting PC

⑧ TEST Port

- Connection button with OCR tester (OT-2000)

It is tested by IEC standard 61000-4-3 for mobile checking function and certified class "A" of frequency range from 80MHz to 2.4GHz.

Caution

- As calibration, in "CALIBRATE MODE" has been completed by manufacturer calibration by user is prohibited.
- System Data(Main configuration data) is an important basic data and it effects to the operational particularity of ACB. So, please use with its factory released default value. If resetting up of default value is unavoidable, please reset the control power after updating its default value.

Button operation method in set-up modes

Self diagnosis method

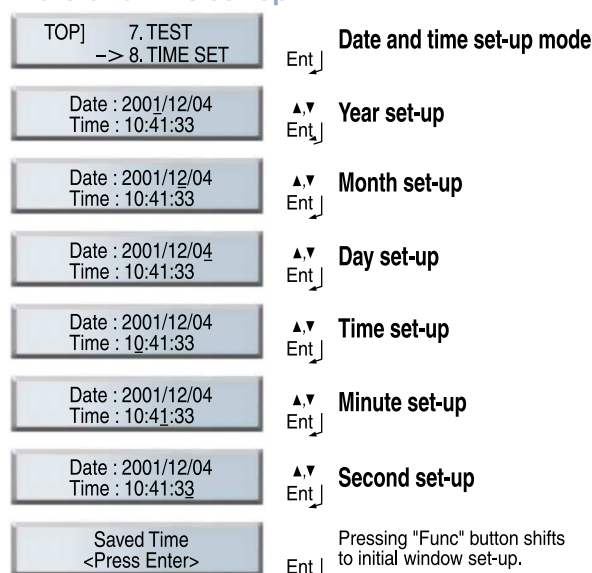

Note)1. In case it displays "Fail", terminate OCR set-up and please contact us regarding the situation.
2. Please do not touch "Ent" button in the Self diagnosis method.

Note) 1. For type LN5 and LN6, please use Neutral CT (output: 5A) in case of using 3P ACB in 3phase 4wire circuit.

2. In case of short circuit accident, instantaneous operation time of OCR is under 15ms.

3. I_{np} is a function for neutral protection. It protects neutral phase in 4 pole ACB from over current.

- ② Long-time delay tripping time
- ③ Short-time delay pick-up current
- ④ Short-time delay tripping time
- ⑤ Instantaneous pick-up current
- ⑥ Pre-alarm pick-up current
- ⑦ Pre-alarm tripping time
- ⑧ Ground fault pick-up current
- ⑨ Ground fault trip time

Standard functions

- Setting the fixed current
- Setting the long-time delay tripping current
- Setting the long-time delay tripping time
- Setting the short-time delay tripping current
- Setting the short-time delay tripping time
- Setting the instantaneous-time delay tripping time
- Setting the ground fault tripping current
- Setting the ground fault tripping time
- Setting pre-alarm current
- Trip Indicator
- Communication

① RS232(Port)

- setting the fixed value
- Monitoring the fixed value
- Monitoring the load current of line
- Monitoring the operating state of ACB OCR
- Performing of Calibration ability

② RS485(Port : 485+, 485-)

- Setting the fixed value by remote
- Monitoring the fixed value
- Monitoring the load current of line
- Transmitting the failure information (failure pole, failure factor)
- Transmitting the self-diagnosis information

Optional accessories

OCR tester

Ratings

Name	OT-2000
Rated voltage	AC 100~240V
Frequency	50Hz, 60Hz (selection)
Output voltage	$I_{n\ max}$: (0-1) → If the value of $I_{n\ max}$ is 1, the output voltage is 200mV I_n : (0-30) $\times I_{n\ max}$ → It corresponds to the signal of the OCR (Ex. If you set I_n to 30, 6V turns out.)
Type of output voltage	o, g, e <small>Note1)</small>
Stop signal	OCR, a-contact, b-contact
Trip time Check	TC: Detect only the operation state of OCR regardless of the time delay characteristics. (Apply DC power)

Key operating explanation

- Hz** Key to select frequency (50Hz, 60Hz)
- SS** Key to select type of stop signal input voltage of the OCR tester (OCR, a-contact, b-contact)
- CL** Key to initialize the test current value when ED has been pressed one time.
- TC** Key to test whether OCR is operated normally or not.

- INIT** Key to initialize test current value (I_n , $I_{n\ Max}$) and LED(trip, testing)
- START** Key to start the test.
- STOP** Key to stop the operation of tester device (Timer, stop output signal)
- RESET** Key to initialize timer. (0 ms)
- ED** Key that should be operated at first to revise test the current value, and select type of the test current.
- Key to shift the digit number of 7-segment, which shows the test current value to right direction
- ←** Key to shift the digit number of 7-segment, which shows test current value to the left direction
- ▲** Key to increase 1 digit by 1 digit of 7-segment that shows the test current value.
- ▼** Key to decrease 1 digit by 1 digit of 7-segment that shows the test current value.
- SET** Key to set the test current value edited by →, ←, ↑, ↓ or CL
- OP** Key to select operational characteristics of trip relay

Note) 1. - o: Pre-alarm, long-time delay, short-time delay, instantaneous-time delay trip
- g: Ground fault trip
- e: Display output of contact except trip relay(Use to check the tester)

Connection method

Auxiliary contact(AX)

- To remote supervisory of the ON/OFF state of the ACB

Ratings

Type			Standard type		High capacity type		Remark
			Resistive load	Inductive load	Resistive load	Inductive load	
Contact capacity	AC	460V	5A	2A	5A	2.5A	
		250V	10A	10A	10A	10A	
		125V	10A	10A	10A	10A

		30V	10A	6A	10A	10A	
Maximum contact No.		AX	5a5b		—		Standard charging type
		HX	—		5a4b		
		AC	5a5b		—		High speed reclose charging type
		HC	—		5a5b		
Selection			Standard offer Note)		Option		

Note) When you order the high capacity type auxiliary contact, the standard type auxiliary contact is not offered.

• Contact operating

The condition of ACB	a-contact	b-contact
ON	ON	OFF
OFF	OFF	ON

Cell switch(C)

To indicate the position (connected, test, dis-connected) of a ACB

It is installed in the upper and back side of a cradle.

(Common use 630~5000A)

Standard contact configuration

- 4C: 1 Disconnected 1 test 2 connected

- 8C: 2 Disconnected 2 test 4 connected (4C × 2EA)

※ Please change contact configurations if you needed

ACB position			DISCONNECTED		CONNECTED
Draw-in and draw-out position			DISCONNECTED	TEST	CONNECTED
Contact operation	CL-C (CONNECTED)		OFF		ON
	CL-T (TEST)		OFF	ON	
	CL-D (DISCONNECTED)		ON	OFF	
Contact capacity	Voltage (V)		Resistive load		Inductive load
	AC	460	5		2.5
		250	10		10
		125			
	DC	250	3		1.5
		125	10		6
		30	10		10
Contact number			4C		

Note) The number of maximum contact: 8C (if needed)

ON/OFF button lock(B)

To protect mis-operation of the ON/OFF button of ACB (common use 630~5000A)

Miss insertion prevent device (MIP)

When the ratings of ACB and cradle does not match, this device mechanically prevent the ACB from being inserted into the cradle of ACB (common use 630~5000A)

Optional accessories

Undervoltage trip device(UVT)

To trip the ACB automatically when the voltage of main power or control power source reduces below its normal value. It consists of UVT coil and UVT controller.

UVT is attached to the inside of main body and UVT controller left side of the main(Fixed type) or cradle(Draw-out).

In addition, external output contact(1a1b),which can use UVT operation as external control signal, is supplied.

* For control power use, please apply AC power only.

UVT ratings

Type	Name	Rated voltage	Operating time	UVT out put contact	Pick-up voltage	Drop-off voltage
Instantaneous type	V1	AC 110V	0.2sec under	1c	Over 85% of the rated voltage	Under 70% of the rated voltage
	V2	AC 220V				
	V3	AC 380V				
	V4	AC 460V				
	E1	DC 24V				
	E2	DC 48V				
	E3	DC 110V				
Time delay type	E4	DC 125V	0.5sec over	1c	Over 85% of the rated voltage	Under 70% of the rated voltage
	T1	AC 110V				
	T2	AC 220V				
	T3	AC 380V				
	T4	AC 460V				
	F1	DC 24V				
	F2	DC 48V				
	F3	DC 110V				
	F4	DC 125V	3sec over	-	-	-
	D1	AC 110V				
	D2	AC 220V				
	D3	AC 380V				
	D4	AC 460V				

Caution

In case of resetting or testing UVT device, please do not maintain 'ON' status of push button for a long time, and besides do not operate often ON/OFF. It can be cause of damage.
(Maintenance duration of 'ON' status : Under 1 second, ON/OFF Cycle : Under 30 Seconds)

Ratings of UVT output contact

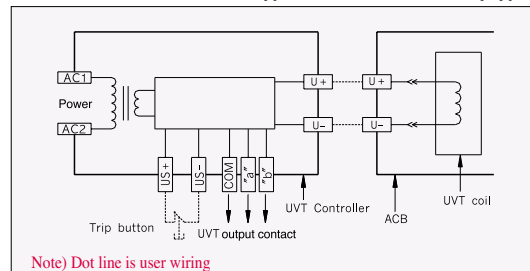

Type		Resistance load	Inductive load	Remark
Voltage	AC 125V	5A	2.5A	Magnetic maintenance type
	DC 30V	5A	2.5A	

Dimension & Circuit diagram of UVT

• UVT controller outline dimension

• UVT circuit of instantaneous type and 0.5 sec time delay type

• How to use US+, US-

1) Test Function

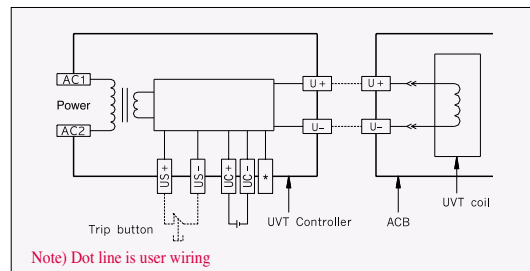

As shown in above circuit diagram, please organize push button.

During the operation in normal status, UVT unit will operate in a normal way if push button will be On. And, user can check the normal operation of UVT unit.

2) Reset (Initialization Function)

A Formation of Circuit diagram and an operation method is as same as instruction explained in Test Function clause. It is a function for initialize function of UVT when user draws out ACB and then put it in original position in the status of normal operation.

• UVT circuit of 3 sec time delay type

Key lock(K1)

To compulsorily prevent specific breaker from charging(ON) or trip(OFF) when two or more breakers are used together by interlocking
-K1: Mechanical ON protection

Counter (C)

To mechanically indicate the times of ON/OFF operation of breaker

Dust Cover (DC)

Dust cover let us see the front side of air circuit breaker due to transparency cover and protect from various pollutions.

Key interlock(K2)

It consists of 3 breakers to supply power stably and it is possible to construct key interlock by using key lock attached to the inside of each breaker

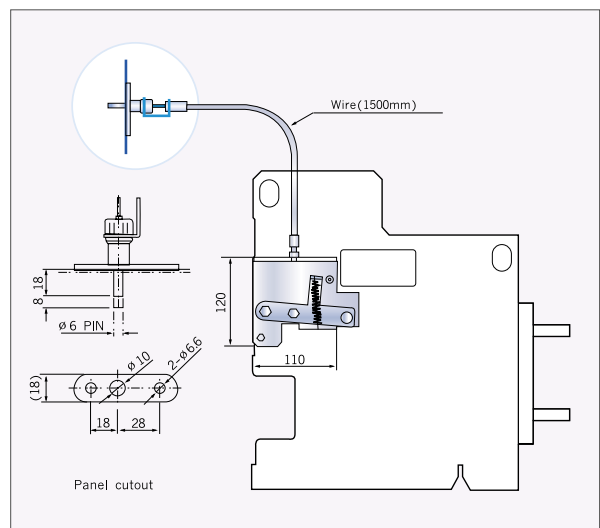

• Operational condition

ACB ₁	ACB ₂	ACB ₃
ON	ON	OFF
OFF	ON	ON
ON	OFF	ON

Door interlock(DI)

To prevent the panel door from opening when the breaker is ON

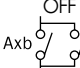

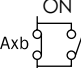

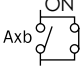

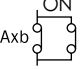

Optional accessories

Shorting b-contact (SBC)

It is the contact to maintain the external control circuit normal condition by disconnection of Axb of auxiliary contact when the position of air circuit breaker is moved from connected position to test position.

The number of shorting b contact is the same with the number(5b) of the auxiliary contact Axb of air circuit breaker.

• B6~B10 contacts(Linkage between Axb and short "b")

ACB condition ACB position	Close position [Auxiliary contact (Axb) : ON]	Open position [Auxiliary contact (Axb) : Off]
Connected position (Shorting b contact : OFF)		
Test position (Shorting b contact : ON)		

Safety shutter lock(STL)

To fix safety shutter for the safety during the operation in draw-out state of a breaker.

Door frame (DF)

It is the device to look fine after the cut of a switchboard door when the breaker is installed. It helps to check the front of a breaker from the outside of a distributing board easily

※ Please refer to door frame in 41, 42, 45, 46page.

Mechanical operated cell switch (MOC)

The ACB mechanically operates, only in case of "connected" position of its main board, so as to display its ON/OFF condition by contact 10a and 10b. Both Standard and large types are available. The contact capacity is identical with the rated auxiliary contacts in page 26.

Condenser trip device (CTD)

To trip the breaker electrically within regular time when the control power source is off. It is used with Shunt Coil(SHT).

If there isn't DC power, it is possible to supply the power to ACB by rectifying the AC power.

• Ratings

Ratings	Specification	
Type name	CTD-100	CTD-200
Rated input voltage(V)	AC 100/110	AC 200/220
Frequency(Hz)	50/60	50/60
Rated charge voltage(V)	140/155	280/310
Charging time	Within 5sec	Within 5sec
Tripping time	over 3min	over 2min
Range of input voltage(%)	85~110	85~110
Condenser capacity	400 μ F	160 μ F

ATS with ACBs

Interlock can be composed only of an electric driven charge type circuit breaker and there are two kinds of bar type and wire one. And in order to incorporate electric Interlock , ATS control is required separately. Electric Interlock charge closing mode, voltage trip coil, closing coil, auxiliary contactor and charge complete contactor are elements for basic composition of ACB.

ATS controller rating

As an operation voltage of ATS Controller it operates a motor of circuit breaker so an operation voltage of ATS controller and an operation of circuit breaker shall be used in the same way.

Model Name	ATSC-110	ATSC-110-C	ATSC-220	ATSC-220-C
Rated voltage	AC110V		AC220V	
Usable voltage range	AC 93.5(±5%)~126.5V(±5%)		AC 187(±5%)~253V(±5%)	
Frequency	50Hz/60Hz			
Consumption power(wave phase)	15.4W

Test function	■	■	■	■
Transmitter control function	■	■	■	■
NRS function	■	■	■	■
Time setting(T1~T6)	■	■	■	■
Fault function(OCR/Circuit breaker trouble)	■	■	■	■
Output contact(auto, load)	■	■	■	■
Communication function (RS-485)	-	■	-	■

- T₁ : At the time when EPCO UN is OFF the delayed time until Generation start-up signal is closed (t₁ : 0.1, 0.5, 1, 2, 4, 8, 15, 30, 40, 50 seconds)
- T₂ : At the time when EPCO UN is ON the delayed time until ACB₂ is tripped (OFF) (t₂ : 0.1, 1, 2, 4, 8, 15, 30, 60, 120, 240 seconds)
- T₃ : At the time when ACB is tripped(OFF) the delayed time until ACB₂ is inputted(ON) (t₃ : 0.5, 1, 2, 5, 10, 15, 20, 25, 30, 40 seconds)
- T₄ : At the time when ACB₂ is tripped(OFF) the delayed time until ACB₂ is inputted(ON) (t₄ : 0.5, 1, 2, 5, 10, 15, 20, 25, 30, 40 seconds)
- T₅ : At the time when ACB₂ is tripped(OFF) the delayed time until Generation start-up signal contactor is opened (t₅ : 60, 120, 180, 240, 300, 360, 420, 480, 540, 600 seconds)

- Stop-mode : In a state that UN (EPCO power) or UR(The Power , Station power) is usable a mode that ACB₁(EPCO Circuit breaker) and ACB₂ (The Power Station circuit breaker) are tripped (OFF).
- N-mode : In a state that UN (EPCO power) is usable a mode that ACB₁(EPCO circuit breaker) is inputted (ON) artificially -UR (The Power Station power) is not related to ON or OFF state and if converting into N-mode during use of UR (The Power Station power) Generation start-up signal is opened.
- R-mode : In a state that UN (EPCO power) is usable or not a mode that ACB₂(The Power Station circuit breaker) is inputted (ON) artificially in a state that UR(The Power Station power) is usable
- Auto-mode : A mode that unusable power (UN or UR) circuit breaker is tripped (OFF) or usable power circuit breaker is inputted (ON) according to unusability or usability of UN (EPCO power) or UR (The Power Station power).

Note) EPCO: Electric Power Co.

ATS with ACBs

Operational condition

In case of using 2 ACBs ATS Controller

- If 1(One) of 2(two) connected ACBs is ON, the other is not ON electrically and mechanically by interlock.
- Operational condition

ACB ₁	ACB ₂
OFF	OFF
ON	OFF
OFF	ON

In case of using 3 ACBs Non-ATS Controller

- If 2(two) of 3(three) connected ACBs are ON simultaneously, the other is not ON electrically and mechanically by interlock.
- Operational condition

ACB ₁	ACB ₂	ACB ₃
OFF	OFF	OFF
ON	OFF	OFF
ON	ON	OFF
OFF	ON	ON
OFF	OFF	ON
ON	OFF	ON

Interlock method

Bar type

Wire type

Interlock is possible regardless of the Ampere Frame sizes and the number of poles. Standard length of wires are 1.8 meters

Terminal code description

AL1 ~ AS	Auxiliary switch a-contact terminal	ALH	AL-1	OCR signal contact terminal (Operational : 15ms under)	CC	Closing coil	⊗ P	Pre-alarm indication contact
BE1 ~ BG1 (New1)	Auxiliary switch b-contact terminal	AL2	AL-2		SHT	Shunt trip coil	—	Factory wiring
TS+1	Charge complete contact terminal	TD	TD	Tripping indication contact terminal	UVT	Undervoltage tripping coil	----	User wiring
M+1	Motor charging power input terminal		T5	Pre-alarm indication contact terminal	AL	OCR signal contact		
CC+1	Closing coil power input terminal	CLG	CLG	Call Switch	⊗ L	Long-time delay tripping indication contact		
S+1	Tripping coil power input terminal	R+		Tripping relay power input terminal ("+")	⊗ S	Short-time delay tripping indication contact		
U+1	Undervoltage tripping coil terminal	R2		Tripping relay power input terminal ("+")	⊗ i	Instantaneous-time delay tripping indication contact		
NP+1	Neutral CT signal input terminal		Ⓜ	Motor for charging	⊗ G	Ground-fault relay trip input indication contact		

Note) 1. In case of auxiliary contact is high capacity, **B10+** and **B10-** can not be used because contact composition is 5a4b.

1. In case of auxiliary contact is high capacity, **U+U-** can not be used because contact cannot put output power of UVT controller.
2. Under voltage trip coil terminal such as **U+** or **U-** shall put output power of UVT controller.

3. The secondary output value of NCT should 5A.

3. The secondary output value of VC1 should 576.
4. Above circuit diagram shows ACB locates on "Connected" position and ACB status will be trip or motor charging completion.

Accessory code description

(Note) 1. In case of auxiliary contact is high capacity, **B10a** and **B10c** can not be used because contact composition is 5a4b.
2. Under voltage trip coil terminal such as **U+** or **U-** shall put output power of UVT controller.
3. Above circuit diagram shows ACB locates on "Connected" position and ACB status will be trip or motor charging completion.

Control circuit

ATS with ACBs (LS controller circuit)

- Note) 1. [] part shows optional feature "N" and "R" distributing wires are in same condition and applied OCR-II.
 2. In case of connecting the trip relay (OCR-II) Control power R+/R1-: AC110V, R+/R2-: AC220V common
 3. In case of connecting the trip relay (OCR-III) Control power R+/R2-: AC/DC110V~220V common use, DC48V, DC24V (R1- contact is not provided)
 4. Please compose "Self maintenance circuit" because alarm contact (AL1+/AL1-, AL2+/AL2-) is a instantaneous operating(under 15ms) type in case of using OCR-II.
 You may not compose "Self maintenance circuit", provided when OCR-III is using for a trip relay.
 5. Please input power to the MCB1, MCB2 of controller from the primary power.
 (If it is tripped OCR at the load part when power is connected, power will not be transferred automatically)
 6. Please connect the control power of trip relay (OCR-II, III) at the primary power section.
 7. According to this circuit drawing, ACB position is "connected" standard, and ACB status is motor charged and tripped.

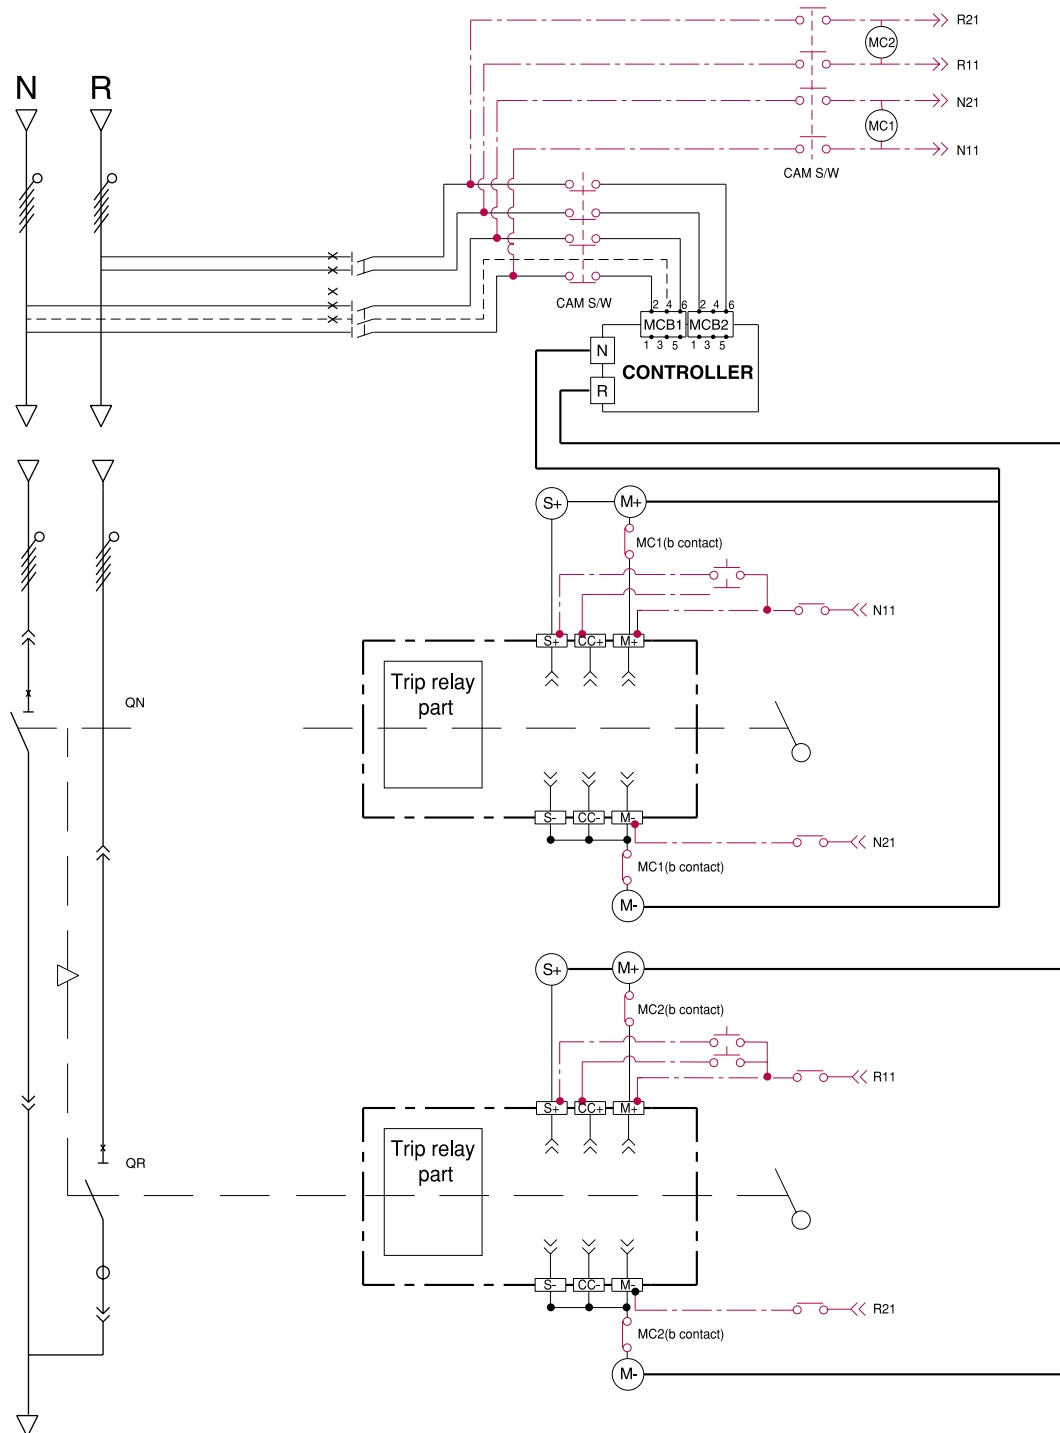

ATS with ACBs (M/G controller circuit)

- Note) 1. □□□ part shows optional feature "N" and "R" distributing wires are in same condition and applied OCR-II.
2. In case of connecting the trip relay (OCR-II) Control power R+/R1-: AC110V, R-/R2-: AC220V common
 3. In case of connecting the trip relay (OCR-III) Control power R+/R2-: AC/DC110V ~220V common use, DC48V, DC24V (R1- contact is not provided)
 4. Please compose "Self maintenance circuit" because alarm contact (AL1+/AL1-, AL2+/AL2-) is a instantaneous operating (under 15ms) type in case of using OCR-II.
- You may not compose "Self maintenance circuit", provided when OCR-III is using for a trip relay.
5. Please input power to the MCB1, MCB2 of controller from the primary power.
(If it is tripped OCR at the load part when power is connected, power will not be transferred automatically)
 6. Please connect the control power of trip relay (OCR-II, III) at the primary power section.
 7. According to this circuit drawing, ACB position is "connected" standard, and ACB status is motor charged and tripped.

Control circuit

ATS with ACBs (Manual)

Caution

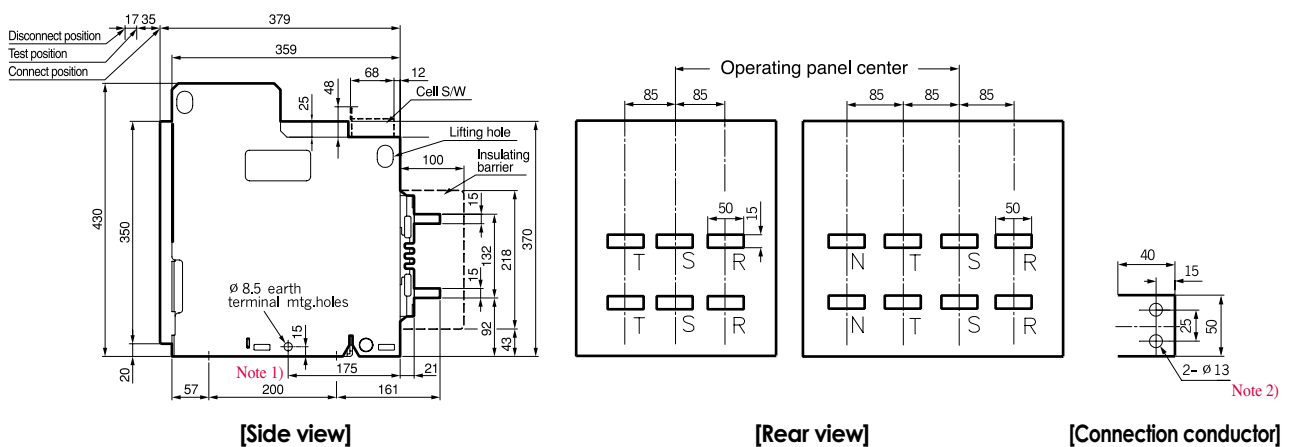

1. ATS Controller will be damaged when MC1 or MC2 is missing. Please compose it essentially.
2. If application of connection wire is required, please compose M+ and M- of Auto mode wiring which shall open when transfer from Auto mode to manual mode.

- Note) 1. Red part shows manual wiring.
 2. Above wiring drawing is simplified, please refer to page 38.
 3. CAM S/W specification : 2position 4contact (4a4b).
 4. MC1, MC2 specification : AX 2b/Minimum contact capacity shall be 10A.
 5. Wiring of Auto/Manual mode of "N", "R" circuit breaker is composed in same way. (When ship a ACB at factory)

Technical information

Deratings by ambient temperature

- **Ambient temperature:** $-5^{\circ}\text{C} \sim \pm 40^{\circ}\text{C}$ (Only applicable when the 24 hours average temperature is below $\pm 35^{\circ}\text{C}$)
- **Altitude:** Below 2000m
- **Environmental condition**
 - Below 85% in humidity with $\pm 40^{\circ}\text{C}$ maximum temperature
 - Within the flammable, ammonia and corrosive gas environment can not be used and stored
($\text{H}_2\text{S} \leq 0.01\text{ppm}$, $\text{SO}_2 \leq 0.01\text{ppm}$, $\text{NH}_3 \leq \text{a few ppm}$)
- **Safekeeping temperature:** $-20^{\circ}\text{C} \sim \pm 60^{\circ}\text{C}$ below $\pm 35^{\circ}\text{C}$ degree of 24 hours average temperature

Applicable current of breaker in temperature

In case of use of over 40°C in ambient temperature, please refer to below table as adjusting the rated currents

Type	Ambient temperature	LBA-06	LBA-08	LBA-10	LBA-13	LBA-16	LBA-20	LBA-25	LBA-32	LBA-40	LBA-50

Note) The data at 40°C are according to IEC 60947-2

Arc Space

When designing switchboard, please keep the distance more than the recommended insulation distance between Ace-MEC ACB and switchboard.

(Unit: mm)

Type	Fixed type	Draw-out type
A	25	25
B	150	150

Note) The number of "A" shall be increased in proportion to the size when attaching UVT, Mechanical Interlock, Door Interlock.

Leader in Electrics & Automation

Safety Instructions

- For your safety, please read user's manual thoroughly before operating.
- Contact the nearest authorized service facility for examination, repair, or adjustment.
- Please contact qualified service technician when you need maintenance.
Do not disassemble or repair by yourself!
- Any maintenance and inspection shall be performed by the personnel having expertise concerned.
